---

STACK

- Backend: Python, Django;
- Frontend: JavaScript, React;
- Version control: Git;
- Infrastructure: AWS.

PROJECTS

Full-Stack Developer, Web App for Automated Mirror Trading

- Implemented web crawlers that scrape trading signals from TradingView and send them in real time to trading bot through WebSocket.

- Set Bitmex trading bot to receive signals in real time from web crawlers and automatically execute orders.

- Created simple landing page and dashboard where you can see past signals and strategies' performance.

- Deployed Django backend, web crawlers and trading bot separately on few AWS EC2 instances; React app is being served as static files by Nginx web server.

Used tools: Python, Django, React, Redux, Redis, WebSocket, Selenium, Git, AWS.

03/2018 – 04/2018

Python Developer, Automated Bot

- Designed and implemented automation bot that gains credits on Like4Like likes exchange platform. These credits can be used for boosting followers, likes, views on Facebook, YouTube, Instagram, etc.

Used tools: Python, Selenium, OpenCV.

- Selenium for automation data inputs, clicks, and other user actions;
- OpenCV for recognizing pair of images in captchas consisted of 7 images.
